We are willing to work hand in hand with the elites in the medical equipment industry

COMPANY PROFILE

V5 Medical LTD. is a company that sells all kinds of medical devices. The company is located in Kunshan City, Jiangsu Province, which is one of the top 100 counties and one of the sanitary cities in China. The company is mainly engaged in the sales and service of all kinds of medical equipment, devices and medical consumables.

The company always adheres to the business philosophy of "creating wealth, repaying the society, serving the staff, and contributing to the cause of human health", actively and effectively promotes the modern enterprise management, implements the business policy of "continuously providing customers with first-class service", and devotes itself to becoming a well-known enterprise in the field of medical equipment sales, and walks out of a standardized road of development in the increasingly fierce competition in the market to become a leading company among its counterparts in and outside of the area .

Adhering to the concept of "people-oriented, respect for science, focus on quality, legitimate business, and common development", we advocate the corporate culture of "rigorous, harmonious and progressive".

Our business philosophy is: talent as the fundamental, market-oriented, quality as the core, service as the purpose, and efficiency as the target

DISCRIPTION OF NEEDLE

TECHNICAL DESCRIPTION

TYPE	POINT	DESIGN	CUTTING PATTERN	DESCRIPTION AND RECOMMENDATIONS
TAPER POINT	○		⭐	Widely used in tissue with a moderate easiness of penetration, as peritoneum,fascia,muscle,fatty tissue,intestine etc.It is also widely used in veins and arteries.Specialties;General Surgery,Gastro-intestinal,Cardiovascular and Gynecology.
REVERSE CUTTING	▽		▽	Cutting needle characterized for its triangular cutting pattern,with the edge on the outside of the needle.Widely used in Reconstructive Plastic Surgery and,in general in Cuticular closing where the objective is a favorable cosmetic result.
CONVENTIONAL CUTTING	△		△	Cutting needle characterized for its triangular cutting pattern, with the cutting edge on the inside of the needle.Widely used in Reconstructive Plastic Surgery and in Cuticular closing where the objective is a favorable cosmetic result.
BLUNT POINT	●		●	Needle indicated specially for very soft or fragile tissue where a little effort is needed to guide the hence thread,avoiding damage to the tissue.Can be used for example in liver,kidney,etc.
TAPER CUTTING	○		○	Widely used in very hard tissue where penetration is required with a circular pattern.This avoids damage to the tissue from the tension of the suture.It is also used in tendons,orthopedics and sternum closure,due to its great penetration and strength.
PREMIUM SPATULA	□		□	Due to its thin flat knife-like shape,with lateral and bottom cutting edges,its passing through the tissue is smooth,minimizing trauma and avoiding accidental penetration of deeper tissue.Recommended for ophthalmic procedures.(For examples cataract and front segment surgery,etc.)
PREMIUM TAPER POINT CUTTING	○		○	Round bodied needle with a special precision cutting point,allowing easier penetration through calcified tissue.The needle is manufactured from a special stainless steel alloy that provides an excellent penetration and high resistance to bending.Ideal for placing heart valves and cardiovascular surgery.
